

OM-530 (Supply Chain Management – SCM)

Course Expectations

- Describe concepts, tools and methods available in SCM.
- Explain the strategic role and drivers of a supply chain.
- Prepare a plan for determining and coordinating supply and demand in supply chains.
- Build an initial strategic framework for analyzing the performance of a supply chain.

In order to achieve aforementioned expectations, two major steps have been taken while designing the course:

- A number of real-world problems are used in order to better comprehend applicability of supply chain management concepts and techniques in real world problems. Extended classroom discussions on real problem analyses will be instrumental in understanding key issues pertaining to application, managerial concerns, and assumptions around the technique while focusing on the real-world problems.
- A number of lab sessions have been included in order to develop practical skills of configuring and using spreadsheets for problem solving.
